

NETGEN

A TOOL FOR AUTOMATIC NETWORK MAPPING

NEED

- The management of the network on a global scale is a difficult to handle and tedious to keep up with.
- The dynamicity of the network is so complex that it is difficult to stay updated.

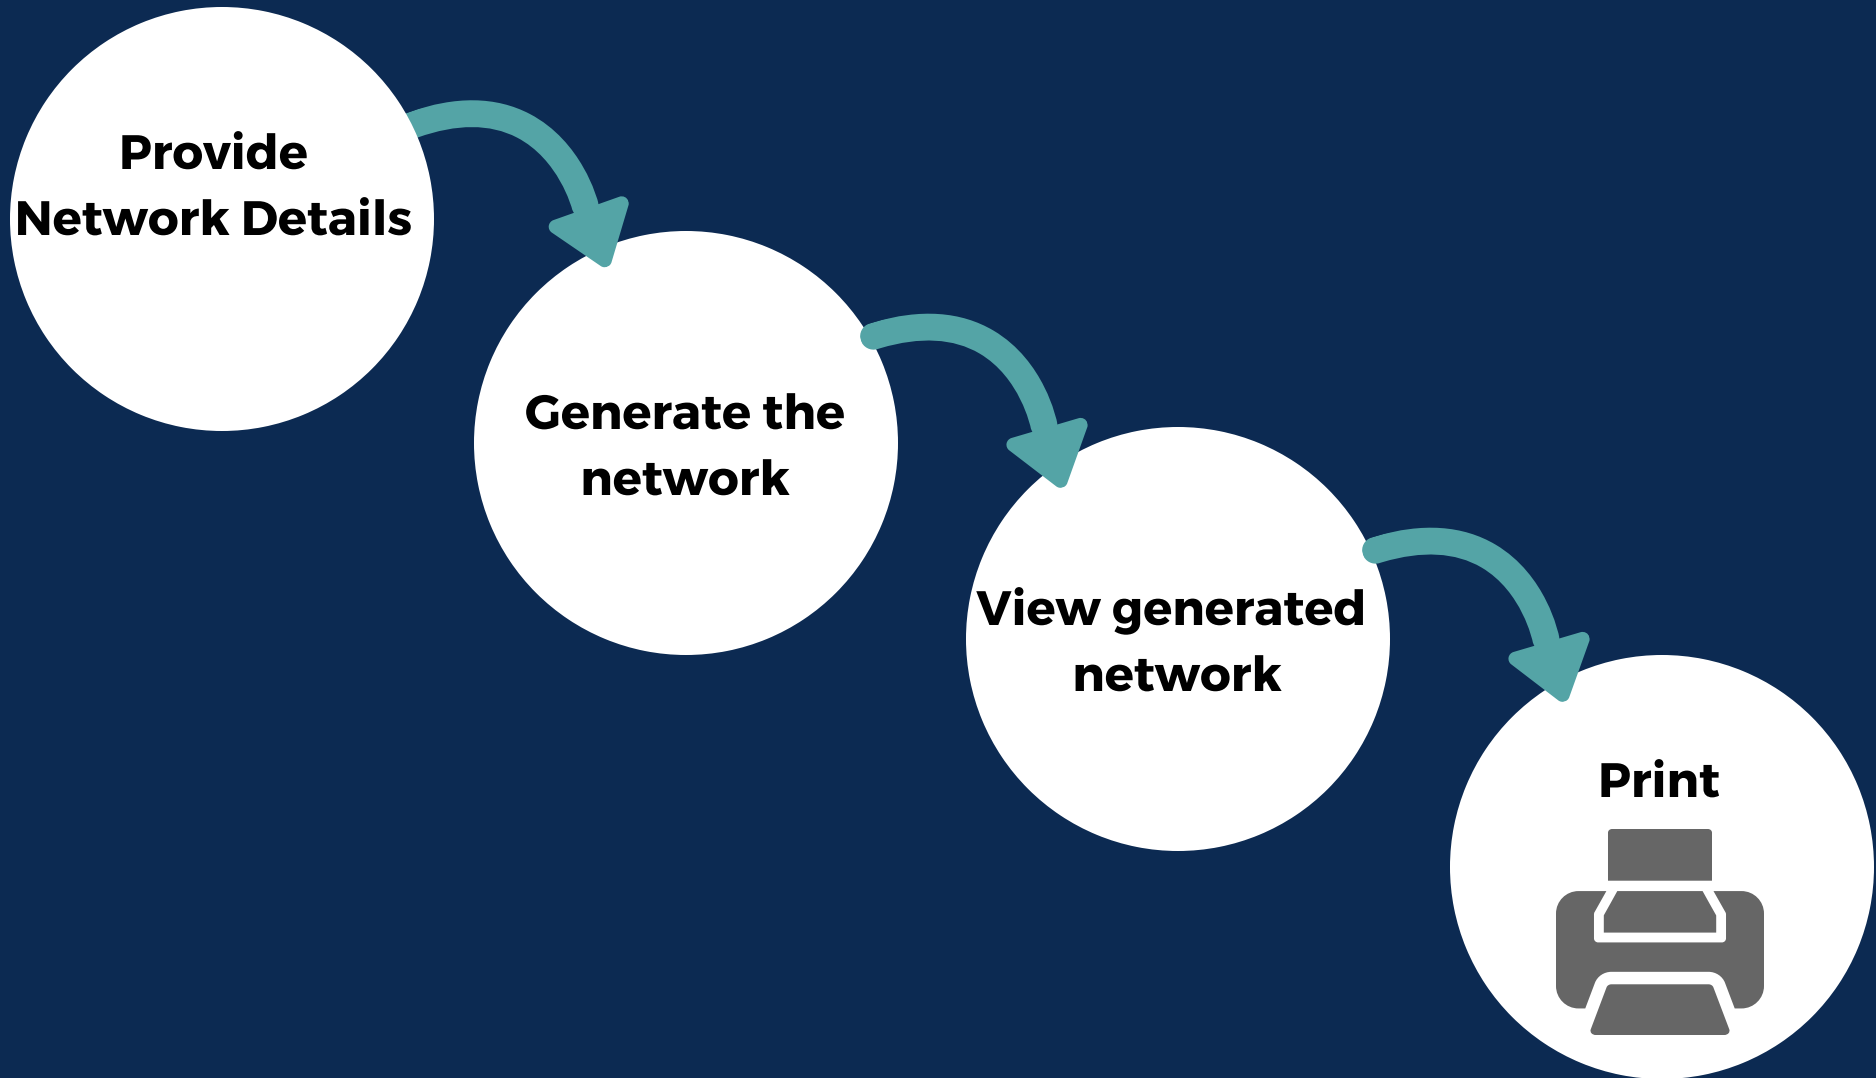

WHY?

- Looking at several products (Microsoft Visio, Orion Solarwinds, etc.,) that offer some kind of ability to do this and is completely manual, but nothing works, the way we would like.
- There is no out of the box solution that makes this possible in a click of a button and it perfectly draws out your network diagram, arranged as logically or better than you would do it yourself.

1 RELEVANCE

NetGen is a good and lightweight tool
designed especially for this purpose.
It can do this within seconds

HOW IT WORKS

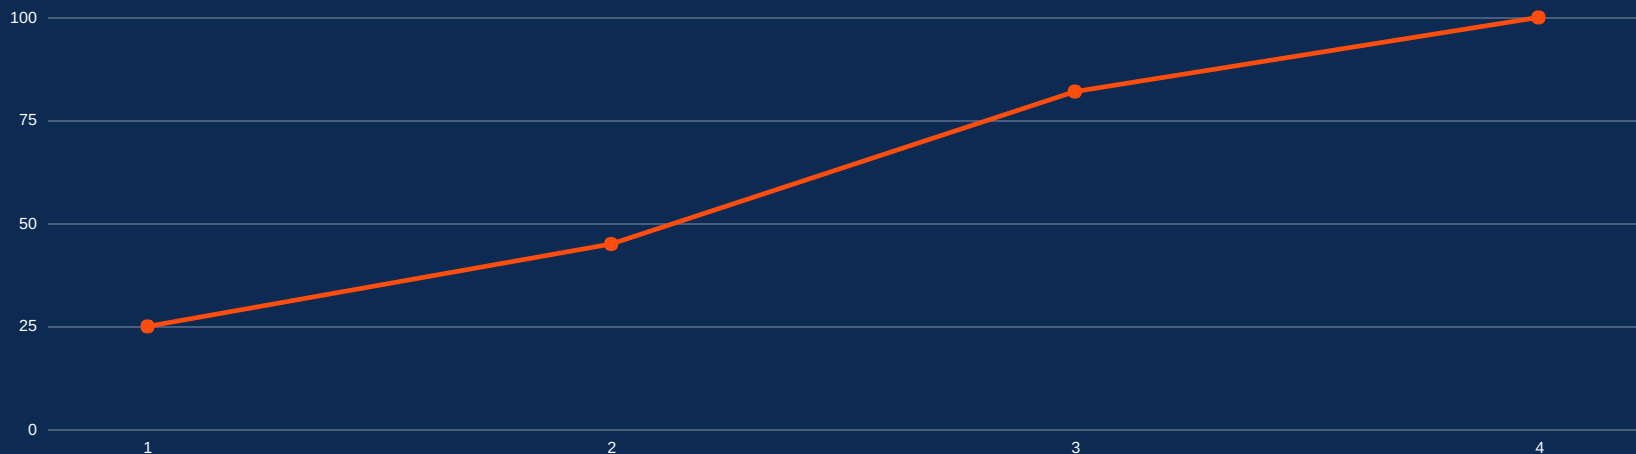

2

TECHNICAL ASPECTS

- Portability
- Easy prototyping
- Powerful Automation
- Platform Independence
- Simple & highly productive
- Map & Visualize Complete Network Infrastructure

3 THE RESULTS

- Full inventory and map matches
- Provides export options
- Eliminate manual efforts and save time
- Troubleshoot faster and reduce downtime
- Increase overall productivity
